

Logiware provides global shipping solutions to forwarders, NVOCC's, traders, and anyone that manages international shipments. Our software increases your profitability, keeps your shipments on schedule, improves your visibility and collaboration with all shipment stakeholders, and scales your business and handle peak workloads.

Some of our many global shipping customers include ECU Worldwide, Transborder, Troy Container Lines, Argos Group, and World Class Freight. The right international Transportation Management System (TMS) can help make your business more efficient, profitable, and improve customer service. After working with hundreds of companies responsible for moving international freight, and incorporating extensive research done by third parties, such as Gartner Group, Forrester, and other industry experts, we have formed a list of key features that contribute the most to business value and ROI when selecting an international TMS system.

Feature	Description	Logiware	WiseTech Global	Descartes	Magaya
International Shipments	Process ocean, air, truck, rail, and consolidation shipments from end-to-end, including quotes, bookings, bills of lading, air waybills, and all other required documents.	✓	✓	✓	✓
Customer Portal	Customers can access the self-service portal to create quotes, track shipment status, enter bookings, access documents, and enter notes for customer service.	✓	✓	✓	✓
Cloud-based	Access and use the system with a web browser on the internet from any location.	✓	✓	✓	✓
Trucking	Process domestic trucking shipments including quotes, bookings, invoices, and BL's.	✓	✓	✓	✓
Warehouse	Receive cargo from bookings, orders, or independently, store in warehouse location, generate bar code labels, pick lists, and inventory reports.	✓	✓	✓	✓
Reporting	Create, configure, save, schedule, and distribute reports in excel or PDF format.	✓	✓	✓	✓
EDI	Exchange all types of EDI messages with carriers, truckers, Customs, other forwarders/agents, banks, and customers (Bookings, BLs, PO's, AES, ISF, AMS, rates, etc.)	✓	✓	✓	✓
Accounting	Fully integrated accounting system that can handle AR, AP, GL, credit hold, statements, reporting, multi-currency, multi-office, and financial documents.	<b>Best</b>	✓	✓	✓
Rate Management	Upload carrier, airline, trucker, rail, and CFS rates with spreadsheets or screen entry. Audit tracking of all changes, and functions to update carrier amendments across multiple rates in a single command.	✓	✓	✓	
Order Management	Create and manage sales and purchase orders, link to shipments, and run reports.	✓			
Workflow Management	Create tasks for different shipment types, trade routes, and customers that can automatically notify, send documents, and alert people based on the task status and provide visibility of highest priority tasks to work on for users.	<b>Best</b>	✓		
Document Creator/ Editor	Create and modify document forms and templates in the system.	<b>Best</b>	✓		
Multi-Language/Office	Show the screen and documents in different languages at the user level and support multiple office locations in terms of logos, addresses, billing, and financials .	✓			
Affordable	Affordable means low cost implementation and monthly user based subscription pricing that includes all of the functions needed to manage your shipments without extra charge add-ons for each module and EDI.	✓			✓
Ease-Of-Use	System should be configurable to remove fields from the screen that are not needed and simple and easy to use.	✓			
Easy To Implement	System should be easy to implement, import your data, train staff, and start using.	<b>Best</b>			
Support	A good system should have knowledgeable support that can be reached at any time to help resolve or explain issues.	<b>Best</b>			
Programming Changes	A system should be configurable to meet your needs, and offer programming changes if required.	✓			
Staffing Services	A knowledgeable and well trained staff to assist with tasks or handling peak workloads is important to scale your business.	✓			
Contract Rate Import Services	Specialized staff to load your carrier contracts into spreadsheets for uploading into the system.	✓
